PROFESSIONAL SUMMARY

Third-year Computer Science student at El Shorouk Academy seeking a Flutter Developer Intern or Junior Flutter Developer role. I build Flutter apps with Cubit state management, a layered repository structure, local persistence (Floor/SQLite and SharedPreferences), declarative routing, form validation, and device features such as geolocation. I also have a programming foundation in C, C++ and C#, and am looking to grow on a team and ship real mobile products.

TECHNICAL SKILLS

Languages & Frameworks: Dart, Flutter (Material UI, responsive layouts, forms and validation)
State & Architecture: Cubit (flutter_bloc), Repository pattern, layered structure (data / domain / presentation), constructor-based dependency injection
Local Storage: SQLite (sqflite), Floor ORM, SharedPreferences, build_runner code generation
Navigation & Device: go_router, geolocator and geocoding, runtime permission handling, sensor input (shake detection)
Tools: Git, GitHub, VS Code, Android Studio
Other Programming: C, C++, C# (foundational), SQL (SQLite queries)

PROJECTS

Notes App GitHub
Flutter, Dart, Cubit, Floor, SQLite, geolocator, geocoding, build_runner
- Built full create, read, update and delete flows for locally stored notes; lists update through database streams.
- Separated data, domain and presentation layers with a repository and Cubit; added input validation.
- Added optional location tagging with permission handling and shake-to-delete, plus light and dark themes.

Meals App GitHub
Flutter, Dart, sqflite, SharedPreferences, go_router, flutter_screenutil
- Created onboarding, meals home, detail and add-meal screens with form validation.
- Persisted meals in SQLite and onboarding state with SharedPreferences; used go_router and responsive sizing.

Work Space App (UI) GitHub
Flutter, Dart, go_router, flutter_svg, smooth_page_indicator
- Implemented splash, onboarding, login, sign-up, create-account and home screens with a feature-based folder structure.
- Built reusable shared widgets and centralized routes, colors and text styles. UI only; no backend integration.

Points Counter GitHub
Flutter, Dart
- Built an early practice app with +1, +2 and +3 score controls and reset using StatefulWidget and setState.
